Research Interests

I work toward open, adaptable **AI agents** that **interactively** help people solve complex problems, with a focus on **coding agents**, **dialogue interactions**, and **tool use**. My work spans benchmarks for dialogue-driven coding agents, methods for few-shot and unsupervised task-oriented dialogue, human-auditable confidence estimation for agents, and frameworks and corpora for multi-party dialogue structure.

Education

University of California, Santa Cruz *Sept. 2021 - Present*
Ph.D. Candidate in Computer Science (Overall GPA: 4.00)
Advisor: Prof. Jeffrey Flanigan

University of Washington, Seattle *June 2017*
B.S. in Computer Science (Overall GPA: 3.63)

Professional Experience

Graduate Student Researcher & Instructor September 2021 - Present
UC Santa Cruz & NSF National AI Institute for Student-AI Teaming (NSF iSAT)
Advisor: Prof. Jeffrey Flanigan

- Produced a new benchmark for evaluating **dialogue-driven coding agents**. [COLM WAB (2026)]
- Developed a state-of-the-art method for fully **unsupervised task-oriented dialogue** combining in-context learning, expectation-maximization, and noisy channel re-ranking. **[EMNLP (2024)]**
- Developed a state-of-the-art method for few-shot/zero-shot **dialogue state tracking** combining diverse retrieval-augmented in-context learning with **executable code actions**. **[ACL Findings (2023)]**
- Core contributor to the Dependency Dialogue Acts (DDA) **multi-party dialogue annotation scheme** **[IWSDS (2023)]**, and the first **DDA corpus and discourse parser** **[ACL Findings (2025)]**.
- **Graduate Student Instructor** for *Topics in Applied NLP* and TA for various NLP & ML courses.

Research Scientist Intern June 2026 - September 2026
Megagon Labs, Inc.
Mentors: Farima Fatahi Bayat, Jean-Flavien Bussotti, Pouya Pezeshkpour, Estevam Hruschka

- Developed an auditable inference-time confidence estimator for black-box **LLM agents**. [preprint (2026)]

Software Development Engineer II September 2017 - August 2021
Apptio, Inc. - Platform Shared Services

- Technical and project lead for a service coordinating end-to-end provisioning of all Apptio products from CRM data, reducing delivery time from days to minutes and cleaning up expired deployments.
- Technical lead for a service for managing versions and access for piral.io micro-frontends across products.
- Core maintainer of the authentication and authorization service for all Apptio products.

Computational Research Intern June 2015 - March 2017
Institute for Systems Biology
Advisor: Prof. Nathan Price

- Implemented the probabilistic annotation algorithm and its application to network gap-filling for constraint-based metabolic reconstructions as a python package, published in *Bioinformatics*. [paper]
- Designed and implemented algorithms for flux-preserving metabolic model translation from one organism to a genetic relative with improved preservation of evidence-based reactions, presented at *COBRA*.

Teaching Experience

Graduate Student Instructor: Led *Topics in Applied NLP (Fall '26)* as a role-based reading seminar.

Teaching Assistant:
Graduate: Adv. Machine Learning for NLP (Win '23), Data Science and ML (Fall '23).
Upper Div. Undergraduate: Intro. Natural Language Processing (Spr '22, '23, '24).
Lower Div. Undergraduate: Programming Abstractions (Win '26), Intro. ML (Spr '26).

Selected Awards and Honors

Baskin Engineering Department Fellowship, UC Santa Cruz 2026
Outstanding Reviewer, EMNLP - ACL Rolling Review 2024
UC Regents Fellowship, UC Santa Cruz 2021

Service

Reviewing:
ICLR 2027
ACL Rolling Review *(top-100 Great Reviewer, 7 'great reviews')* 2024–2026
Workshops: COLM Agent Behavior, EACL SRW, ACL SRW, BayLearn 2025–2026

Mentoring:
UCSC CSE Directed Reading Program Mentor 2022

Organizing:
UCSC CSE PhD Slug Lunch Seminar 2025–2026

Technical & Engineering Skills

Experienced software engineer and researcher, proficient with and without coding agents (Claude Code, Codex). Strengths and experience support ownership across the research-to-production pipeline:

Research Engineering: NLP and deep learning with Python, PyTorch, vLLM, OpenHands, AutoGen
Service Design & Implementation: owner of services in Python, Java, TypeScript/Node.js, React
Deployment & Operations: deploying production services with AWS, Docker, Kubernetes, CI/CD
